

Information: <http://da.pubs.informs.org/> View the journal: <http://da.journal.informs.org/>

Decision Analysis is a peer-reviewed international journal published by INFORMS dedicated to advancing the theory, application, and teaching of all aspects of decision analysis. The primary focus of the journal is to develop and study operational decision-making methods, drawing on all aspects of decision theory, decision analysis, and behavioral decision theory with the ultimate objective of providing practical guidance for decision makers. As such, the journal aims to bridge the theory and practice of decision analysis, facilitating communication and the exchange of knowledge among decision analysts in academia, business, medicine, industry, and government. Articles will contribute to these goals in many ways, using a wide variety of methods and approaches. Appropriate topics include:

- the discussion of new or existing procedures, processes, or algorithms for implementing decision analysis,
- cognitive, psychological, organizational, economic, policy, or social issues in applying decision analysis,
- innovative uses of information technology to perform decision analysis,
- issues in applying decision analysis to real-world situations,
- and other topics that further the theory and practice of decision analysis.

Articles should generally remain faithful to the intellectual foundations of decision theory

and decision analysis. The journal welcomes original contributions that challenge the field, for example by showing how concepts, ideas, and methods from other fields (such as game theory, experimental economics, neuroeconomics, behavioral finance, consumer behavior or geographical information systems) can improve the theory or practice of decision analysis. The journal also publishes articles that review and summarize important topics or advances of interest to decision analysts or that provide original historical, scholarly, or practical perspectives on the field. In addition, the journal encourages articles that support the teaching of best practices, such as state-of-the art applications, case studies, and tutorial articles on decision-analysis methods.

Audience

The Decision Analysis audience includes anyone interested in practical aspects of decision analysis and decision theory. Because decision theory and decision analysis are highly interdisciplinary, our audience in the research community includes specialists in decision theory, psychology, economics, statistics, forecasting, artificial intelligence, decision support systems, operations research, and management science. Our audience also includes practitioners of decision analysis who work as consultants or as in-house experts within organizations and those who teach courses in decision analysis or decision making in general.

Special Pricing to Subscribe to Decision Analysis

Decision Analysis is published by INFORMS
(The Institute for Operations Research and the Management Sciences).

The Decision Analysis Society (DAS) is a subdivision of INFORMS.
(<http://decision-analysis.society.informs.org>)

► For members of INFORMS:

Join the Decision Analysis Society (DAS) in 2010 and online journal access* is included for free! (Other special pricing below)

- Regular INFORMS member dues: \$30.
- Retired INFORMS member dues: \$10.
- Student INFORMS member dues: \$0.

* You can receive the print journal for an additional \$20.

► For Non-members of INFORMS (students or professionals):

- Total cost: \$45. Join the Decision Analysis Society for \$45/year, get online access included for free, and receive the print journal for an extra \$20/year.

Without the special deal above, the non-member 2009 annual rate to subscribe to Decision Analysis is \$100 (online only) or \$160 (print mailed to US address and online).
